Response Wirefree 433MHz SA5 Control Unit (SA5CU)

The SA5 control panel has an affordable array of features to cover even the most challenging of security issues. The Control panel can not only offer you full protection against intrusion, but will also help you keep track of the people with access to the property. With a full 50 event "Event Log" it is possible to view all recent actions involving the panel - user access (of which there can be multiple "user profiles" with different access codes) alarm condition etc.

The panel can be connected to a telephone line to utilize many extra facilities. The panel can function as a full answer machine to digitally store messages when a telephone call is missed. You can telephone your alarm panel to gain all sorts of information as to the status of the alarm (which can be changed remotely - arm the alarms from anywhere in the world!!) there is also a built in microphone on the panel to enable you to listen in to your property (as well as talk back through and integral speaker) Named zones ("bedroom1," "living room" etc) makes the zone use and battery monitoring simple and effective - with a clear and precise built in LCD screen.

The Control unit will arm, disarm or activate the alarm via the built in keypad or by receiving a signal for a remote control.

All Control units are individually coded at the time of installation with your selected security code and no wiring is required other than the mains supply to the alarm panel (24hour battery back up in the event of a mains power failure)

FEATURES:

Feature	Benefit
100% wirefree	Quick and easy to fit, with no messy wiring
All fittings, screws and batteries included in the kit	The system can be installed in around one hour, only tools required are a drill and a screw driver
Anti jamming facility	The system will go into full alarm mode if attempts are made to jam the frequency and disable the alarm
Operates on 433 MHz radio frequency	Less "crowded" than other frequencies
Remote control setting and un-setting	No need to remember pin numbers or deal with complicated programming, the system is armed and disarmed with one button on the remote control
Panic Button	Allows the system to be put into full alarm mode if an intruder is detected whilst the user is in the property
Audible and visual alarm verification	LED's on the siren give an additional indication of an alarm activation, useful for the hard of hearing
Anti-tamper facility	The System will alarm if an attempt is made to tamper with or vandalize any component of the system (except remote control)
Flexible entry/exit delay setting	Easy to set entry/exit times from LCD panel
Multiple zone setting options	Zones can be set to 24- hour intruder, intruder, fire, test or personal attack functions as required
Voice dialer facility	Up to 4 phone numbers can be programmed into the system, which can notify the user or neighbours with a pre-recorded message when the alarm is activated
Voice Memo facility	Voice message can be left for other users at the panel
Latch -key facility	Using the voice dialer facility the system will notify the user via a phone call if users with specified PIN numbers have armed or disarmed the system. Useful for knowing when children return from school.
Chime facility	Zones can be set to chime rather than alarm if the user requires added security whilst inside the property

IDEAL FOR:

Expanding and upgrading any Response "SA" alarm system - fully compatible with all components. "Un-maintained" property where an intrusion would cause the unit to dial out for assistance (mobile phone, friends, family or next door neighbours for example). Using voice dialer facility, the system will notify the user via a phone call if other users with specified PIN numbers have armed or disarmed the system. Useful for knowing when children return from school for example. Areas where you need to monitor access for example, a shop floor, this is because zones can be set to chime rather than alarm if the user requires added security whilst inside the property
