

Response Wirefree 433MHz Remote Control (SAR)

The Response wirefree Remote Control (SAR) enables you to operate your Response Alarm at the touch of a button. The Response Alarm will give an audible and visual confirmation each time the remote is used. Remotes can be carried with you and you can switch your Response Alarm On or Off (arm and disarm) as required. A built in "Panic Button" will enable you to activate your Response Alarm into a full siren at any time for added peace of mind - and for testing. The remote also has a part arm button allowing you to use the independent zone features of your alarm from a remote location at the touch of a button. (a feature of control unit based systems)

The Remote Control will arm, disarm or activate the response alarm at the touch of a single button. A security coded signal is automatically sent, which activates the Response Alarm in an instant.

All Remotes are individually coded at the time of installation with your selected security code and no wiring is required.

FEATURES:

Add as many wirefree remotes as required to your Response Alarms System
Arm or Disarm your Response Alarm at the touch of a button from anywhere within range
Incorporates a personal attack button
Can be used up to 100 metres from the Response Alarm (free air space)
Confirmation LED Light

IDEAL FOR:

Giving to friends or relatives to operate your alarm without revealing your security code.
Simple Remote Operation - from your bedside/ car for example. Where a panic alarm is required
